# 6 free data set sources to use for data science projects

6 Popular Sources
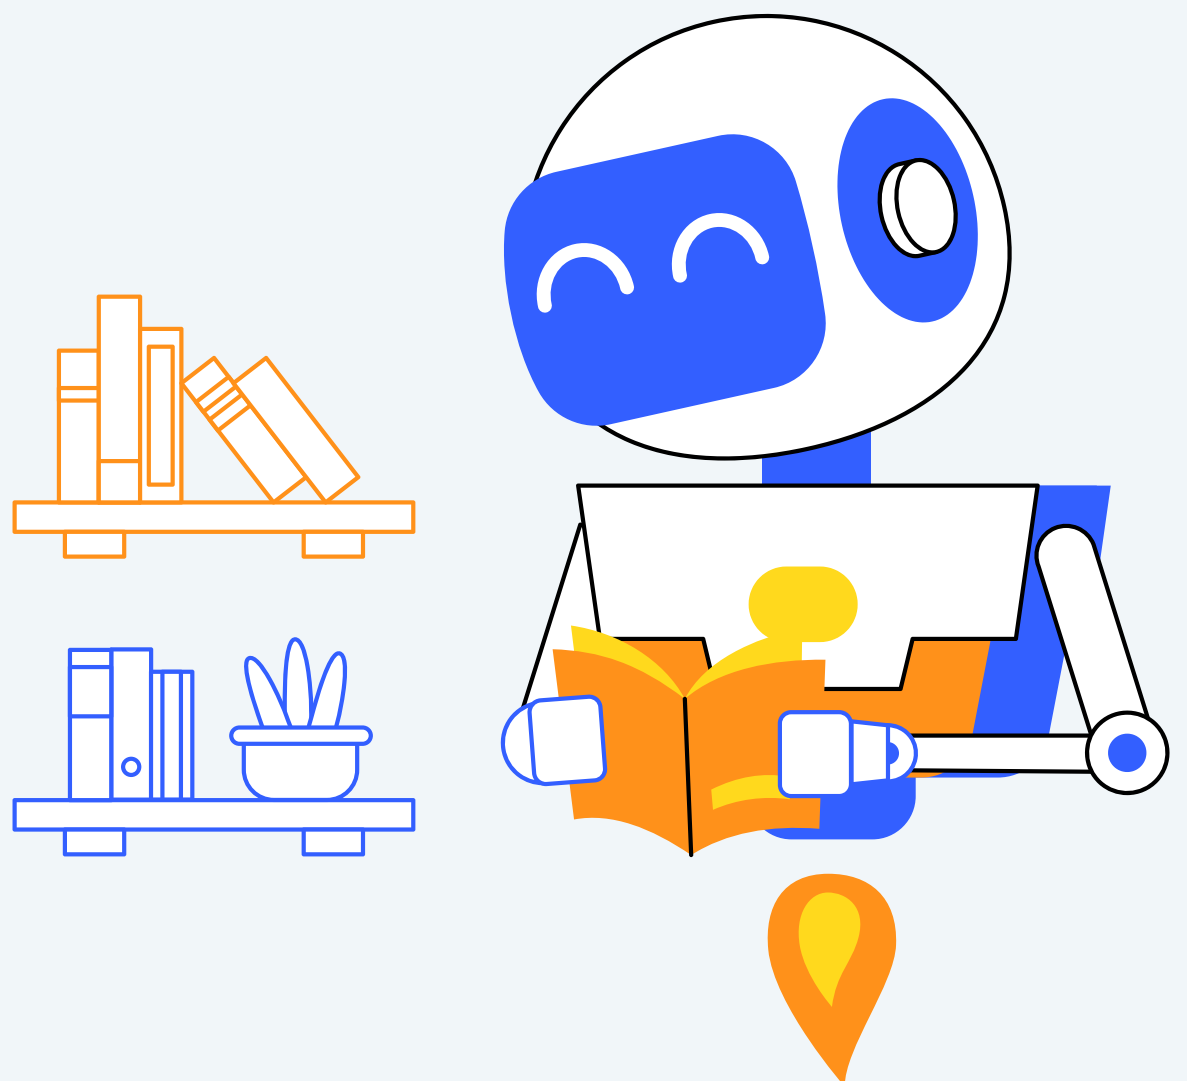

Sure! Here are six popular free data set sources you can use for data science projects:

1

Kaggle :

Kaggle is a well-known platform that hosts a large collection of diverse datasets contributed by the community.

2

UCI Machine Learning Repository:

This repository from the University of California, Irvine, offers a wide range of datasets for machine learning and data analysis.

3 Data.gov :

The US government's open data portal provides access to a vast array of datasets from various federal agencies.

4 Google Dataset Search :

Google Dataset Search allows you to discover datasets across the web, spanning different topics and domains.
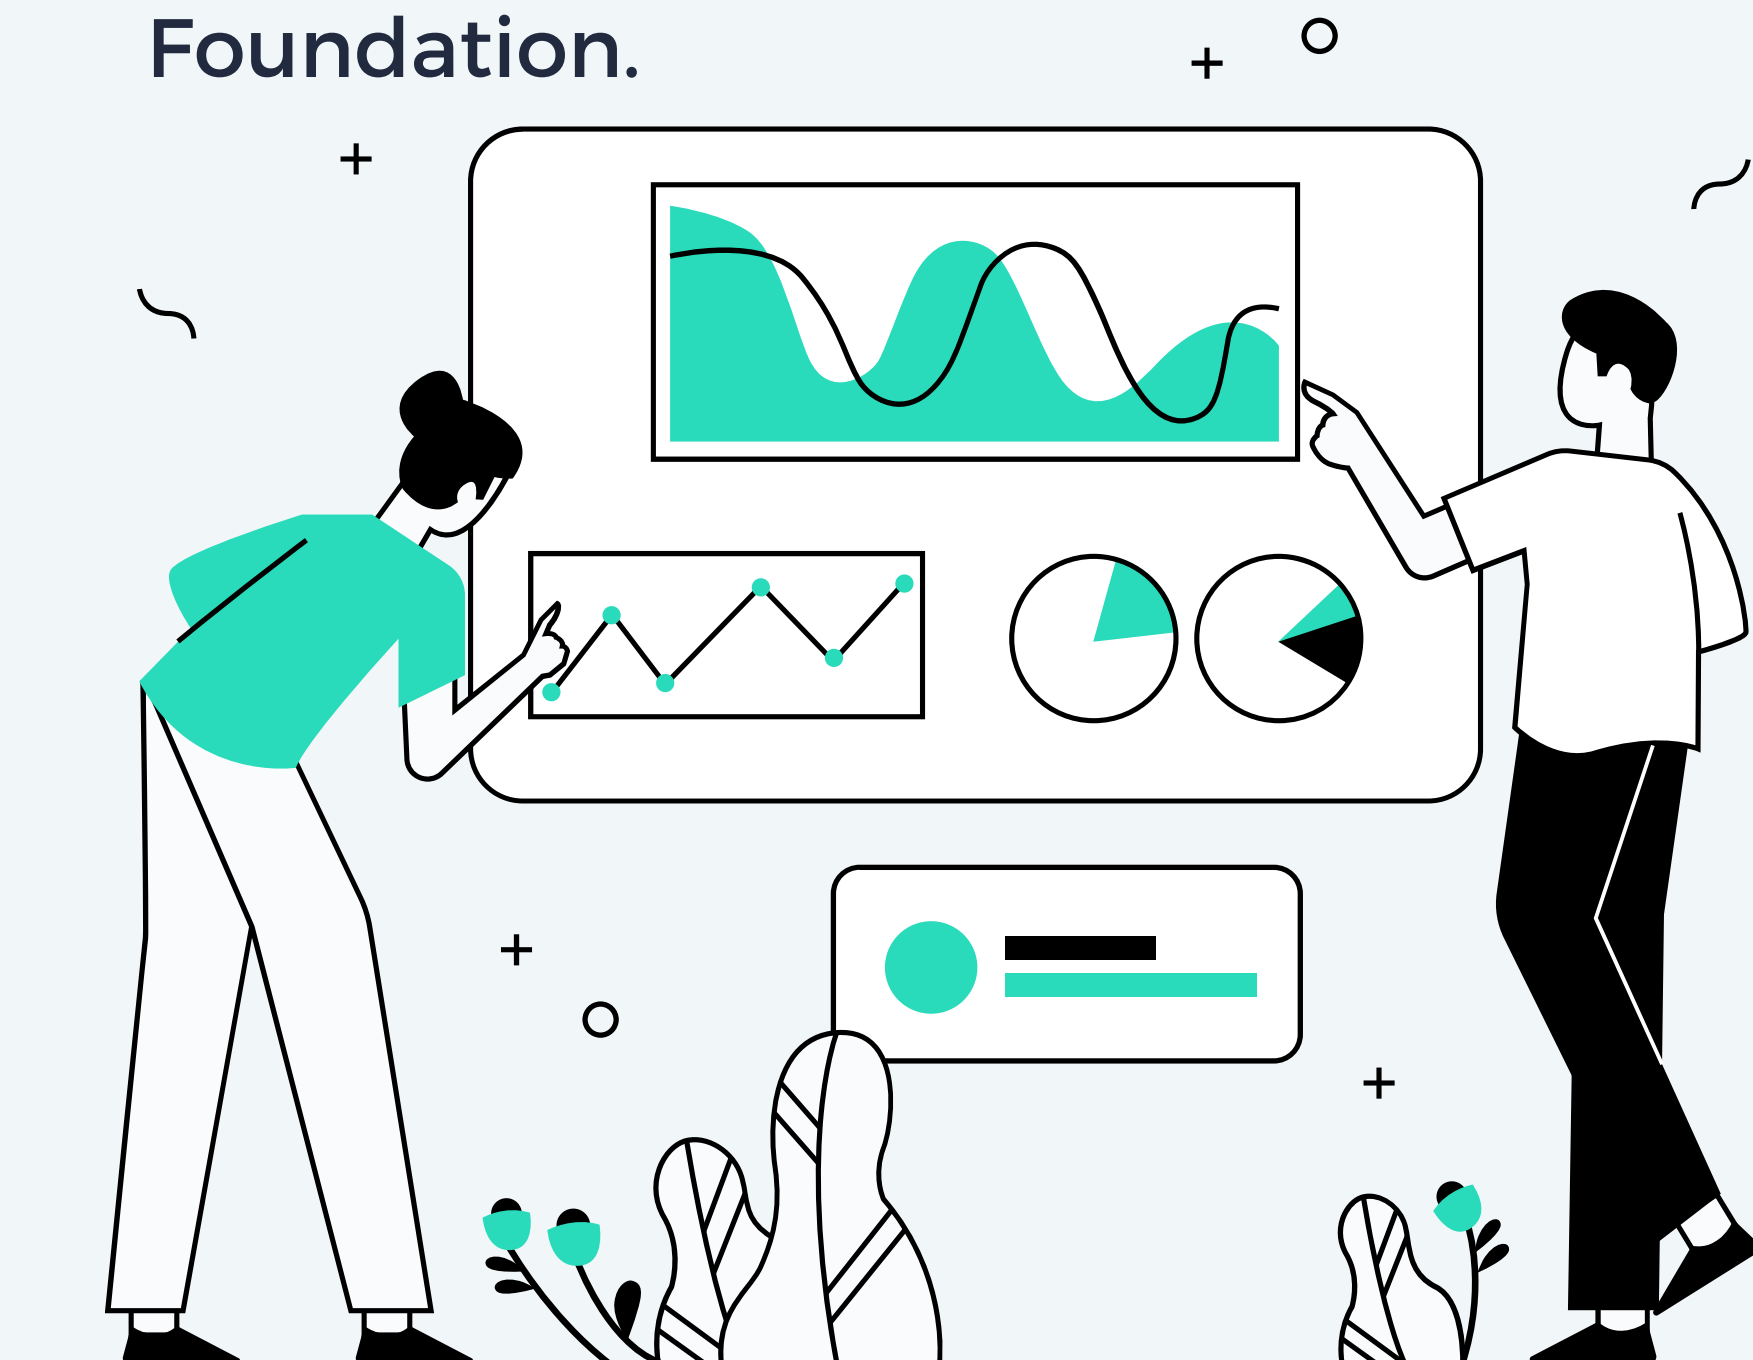

5

World Bank Open Data:

This platform provides a wealth of global economic, social, and environmental datasets.

6

DataHub:

DataHub.io offers a collection of datasets across different domains, and it's maintained by the Open Knowledge Foundation.

Remember to check the licensing and terms of use for each dataset to ensure they meet your project requirements. Happy data science-ing!
